

Structure Of The Network Printer

Note: do not use hand to touch the print head do not plug the power line when machine not turns off

1.How to install ribbon

2.How to install label or sticker

Note: do not use hand to touch the print head do not plug the power line when machine not turns off

3.Label position automatically

when the printer is ready,pls press feed button till the green and red lights shine,then the label will be detected to the correct position.

4.All types of the label detection mood

(1)Gap label: Detects label position automatically by gap paper sensor. The label include: die-cut label,Perforated gaps

(2)Black mark label: Detects label position automatically by reflective paper sensor.

The label include: Mark wristbands, Mark gaps and labels

★If paper just move a little or the STATUS light on when paper walk, close printer and repeat steps 1-3,the continues label do not need to detect.

5.Install Labelshop for LEDEN V5.32 software(Don`t need to install printer driver,pls

print directly)

1.Put CD into the disk driver.

2.Click the software installer.

5.According to the label size,set width(from left to right) and height(from up to down).

3. Follow the installtion steps.

4.Choose the printer resolution (203dpi 或 300dpi).
